

Northern Connections

Our joint challenge is to test the use of domestic innovation support measures transnationally and address barriers to competition, which exist between clusters and regions.

Our objective is to get more enterprises to participate in transnational innovation collaboration via strengthening transnational cluster and city/region cooperation.

The main output is building capacity and transnational relations of sustainable energy clusters to provide demand-led innovation support.

Our approach is to function as a bridge between private and public sector on transnational innovation support.

www.northsearegion.eu/northern-connections

Northern Connections is a partnership of 21 clusters, cities, regions and knowledge institutions working together to create transnational innovation between energy sector enterprises and clusters in the North Sea Region.
