

Invitation virtual
conference & matchmaking:

Nordic-Dutch Hydrogen Solutions and Opportunities for Green Growth

November 25, 2020, 10:00-12:30 CET

Jointly organized by the Nordic embassies in the Netherlands and the New Energy Coalition, this virtual event brings together business, research and umbrella organisations active in the field of hydrogen. It provides a unique possibility to share and create new business opportunities related to hydrogen and to establish new collaborations with international partners in the energy transition.

Virtual conference & matchmaking

Keynote speakers from the Nordic countries and the Netherlands provide insights into current and future developments and challenges related to the role of hydrogen in the energy transition. Perspectives on investments, bottlenecks, pilots and projects in development will be discussed as well as innovations and collaborations that are needed to contribute to a cost effective and successful implementation and incorporation of hydrogen in the energy system.

A key part of the program is the **B2B matchmaking sessions** which will take place online with participants from the Netherlands and the 4 Nordic countries. The sessions will be pre-arranged one-on-one meetings with potential collaboration partners. The matchmaking offers you:

- *Find new international collaboration partners*
- *Sector-specific exchange with international experts in the field of hydrogen*
- *Expand your network and make new contacts from businesses, research and other stakeholders*

This seminar is free of charge. Please find more information about the program, registration and the matchmaking process here: <http://bit.ly/HydrogenConference>
