

H2 Aberdeen: Hydrogen is here

THE FUTURE...WHERE DO WE GO NEXT?

- The City has developed a Net Zero Aberdeen Roadmap which is seeking to encourage uptake of electric and hydrogen vehicles in the City
- Working with North East Scotland Hydrogen Ambition Steering Group who are looking to set up a Transport Taskforce to consider how to further roll out hydrogen vehicles
- Develop a Stakeholder List for the City and Region for organisations interested in trialling hydrogen vehicles
- Looking to establish a purchasing framework for hydrogen vehicles that would allow us to consider larger scale retrofitting and lease and / or purchase of vehicles to lower prices – any organisation wanting to access that framework would need to be listed when the framework is tendered
- Seek to find funding from European, UK, Scottish and other funding sources to subsidise the cost of vehicles and fuel
- Currently have a number of Toyota Mirais that could be allocated at maintenance price!
- Today is just about transport – other hydrogen applications are available!
- Please sign the stakeholder list so that we can keep you up to date on how hydrogen transport projects – and other opportunities ! – might progress
- Enjoy the vehicle showcase!

Hydrogen is here.

Thank you, any questions?
